Introduction	<i>xvii</i>

Chapter 1 Introducing JMX..... 1

System and Resource Management Challenges	1
JMX Overview	4
How JMX Works	5
Implementing JMX	5
JMX Architecture	6
Instrumentation Level	8
Agent Level	11
Agents	11
MBean Servers	11
Distributed Services Level	12
Modular Server Architecture	15
Writing Your First MBean	16
Writing Your First Agent	17
Summary	20

Chapter 2 The Three-Level Model: Instrumentation and MBeans 21

An MBean Primer	22
Naming MBeans Using Object Names	23
Standard MBeans	24
Dynamic MBeans	25
Implementing the DynamicMBean Interface	26
Eliminating the DateTimeServiceMBean Interface	26
Implementing the DynamicMBean Methods	28
Model MBeans	35
Open MBeans	35
MBean Notifications	35
MBean Information and Metadata Classes	37
Adding Fields to Your MBean	38
Modifying the setDate and setTime Methods	38

Modifying the stop and start Methods	39
Enabling the MBean to Add and Remove Notification Listeners	40
Modifying the mBeanInfo Object	41
Creating the Notification Metadata Objects	41
Summary	42
 Chapter 3 The Three-Level Model: Agents.....	43
The Agent Level of JMX	43
MBean Servers	44
Opening Up the ServiceAgent	45
Declaring an Effective Constructor	46
Adding the addResource Method	46
Adding the getResources Method	48
Categorizing Resource Groups Using Domains.....	49
Domain Names	49
Uniquely Naming MBeans Using Key Properties.....	49
Extending an Agent with Agent Services	50
Dynamic MBean Loading	50
Using Monitors to Track Changes	52
Scheduling Notifications Using Timers	58
The Relation Service	65
Summary	76
 Chapter 4 MBean Servers.....	79
Creating an MBean Server	79
Finding an MBean Server	79
MBean Server Delegate.....	81
Modifying the Default MBean Server Implementation.....	82
Naming and Registering MBeans	82
Controlling MBean Registration	84
MBean Registration Notifications	85
MBean Server Queries.....	86
Query Expressions	87
Applying Query Expressions	89
Methods for Defining Query Expressions	93
MBean Proxies.....	97
MBean Server Remote Communications.....	98
Summary.....	99

Chapter 5 Distributed Management System Design	101
Management System Evolution	101
History of Management Standards and Initiatives	102
History of Management Designs	107
Management Framework Patterns	111
Specialized/Detached	111
Centralized	112
Hierarchical	112
Distributed/Cooperative	113
Manager/Agent Frameworks	114
Managers	114
Agents	115
Manager and Agent Models and Roles	116
Master Agents and Subagents	118
Manager Domains	119
Manager of Managers (MoMs)	120
Managers and JMX	121
Summary	122
 Chapter 6 The Three-Level Model and Distributed Services	 127
Clients and Servers Unite with Connectors	128
Creating Connector Servers	129
Publishing a Connector Server with Existing Infrastructures	130
Creating Connector Clients	131
Using a JMXConnectorFactory to Create a Connector Client	131
Using a Connection Stub to Create a Connector Client	131
Finding a Connector Server	132
Finding Servers Using Connector Server Addresses	132
Terminating Connections Between Clients and Servers	133
The RMI Connector	133
Mechanics of the RMI Connector	133
JMX and Distributed Notification Events	134
RMICConnector Notification Events	135
Pluggable Object Wrapping	136
The Generic Connector	136
The Generic Connector Protocol	137

Bindings to Lookup Services	140
Lookup Attributes	141
Summary of Environment Parameters	142
Service Templates	144
Summary	148
 Chapter 7 JMX Connectors	 151
Establishing a JMX Remote Connection	151
MBean Server Operations Through a Connection	152
Terminating a Connection	153
Connecting to Connector Servers Using Connector Server Addresses	153
Creating a Connector Server	154
The RMI Connector	155
Using RMI Transports	156
Mechanics of the RMI Connector	156
Connecting to an RMI Connector Server	159
The Generic Connector	160
The Pluggable Transport Protocol	160
Customizing Serialization Using Pluggable Object Wrapping	161
Defining a New Transport	163
Summary of Environment Parameters	164
Describing JMX Services Using Service Templates	167
Summary	167
 Chapter 8 Remote Lookup	 169
Finding a Server	169
Publishing a Server	170
How to Connect to an RMI Connector Server	170
Bindings to Lookup Services	171
General Principles	171
Using the Service Location Protocol	175
Using the Jini Network Technology	180
Using the Java Naming and Directory Interface (LDAP Back End)	185
Summary	193
 Chapter 9 JMX Clients	 197
Connector Clients	197
Finding a Connector Server	197
Looking Up a JMX Service URL with SLP	198

Looking Up a JMX Connector Stub from the Jini Lookup Service	199
Looking Up a JMX Service URL from an LDAP Server	201
Establishing a Connection	202
JMXConnectorFactory	202
Connection Stubs	203
Connecting to an RMI Connector Server	203
MBean Server Operations Through a Connection	204
Distributed Notifications	204
Adding Remote Listeners	204
Filters and Handbacks	205
Removing Listeners	206
Terminating a Connection	207
Abnormal Termination	207
Creating a Connector Client	208
Mechanics of the RMI Connector	208
The Generic Connector Protocol	208
Summary	211
 Chapter 10 Security	213
Connector Server Security	213
Subject Delegation	214
Using the JMXAuthenticator Interface	214
Basic Security with the RMI Connector	215
How Security Affects the RMI Connector Protocol	215
Implementing Tighter Security	216
Security and the Generic Connector	216
Handshake and Profile Message Exchanges	217
Using the SASL Message Class	226
Using Fine-Grained Security with Connector Servers	229
Summary	234
 Chapter 11 JMX in the Industry	237
AdventNet	237
Agent Toolkit Java Edition	237
ManageEngine JMX Studio	239
BEA Systems	239
WebLogic Server	239
IBM	241
WebSphere Application Server	241
Emerging Technologies Toolkit	242
JMX Bridge	242

IONA Technologies	242
Orbix E2A Application Server Platform	243
IONA Administrator	243
XMLBus	244
JBoss	245
JMX4Ant	246
Tomcat	247
The JMX Proxy Servlet	247
XMOJO	248
MX4J	248
MC4J Management Console	249
MC4J Layout	250
MC4J and JBoss	251
MC4J and WebLogic	251
MC4J and Tomcat	251
Summary	251
 Chapter 12 A Summary of JMX	253
Instrumentation, Agents, and Distributed Services	253
MBean Servers	254
Designs of Distribution	256
Distributed Services and Remote Access	259
Connectors	259
Connector Server Addresses	260
Protocol Message Exchanges	261
Remote Notification Events	262
Remote Agent and Server Lookup	262
Remote Clients	263
Security	264
Industry Appeal	265
Conclusion	266
 Index	267
